

# TELCO: NEW BUILD CELLULAR TOWERS

CLIENT

**Telco**

LOCATION

**Auckland**

## Stellar cellular New Build Cellular Towers

### SETTING THE SCENE

The existing style of cellular tower, known as the light pole, had done its dash. A new cellular site construct was needed for the country's biggest city; Auckland.

The size of the project, managing the infamous traffic issues and contending with the ever changing weather issues made this big project even bigger.

To make the project flow smoother new build cellular towers were assembled and tested at Connect 8's headquarters in Mt Wellington and then transported to the eventual site.

### SOLUTION

Seamless coordination with multiple vendors for the supply of concrete work, temporary traffic management, equipment and testing were the expected 'norm' Having a team of experienced, competent, capable and passionate people with the necessary expertise to handle complex projects helped.

Using state of the art testing equipment mounted on Ranger Utes was another factor behind the multiple site issues easily managed.
